Transmitter Radiated Spurious Emissions

During radiated emission testing all antenna ports of the base station were terminated with 50ohm termination blocks as shown in the diagram below.

See ANSI C63.26-2015 paragraph 5.1 for details of test setup requirements. Based on antenna port conducted spurious emissions tests results, preliminary scans for radiated spurious emissions were performed in 30MHz – 9GHz frequency range.

One radiated emission test configuration (with the external cooling fan) was used to prove compliance for both 3GPP Band 5 and the 3GPP Band 29 frequency bands. The 3GPP Band 5 transmitters were enabled at maximum power on all four ports. The bottom, middle and top frequency channels for Band 5 were enabled. The 3GPP Band 29 transmitters were enabled at maximum power on antenna ports 1 & 2 (antenna ports 3 & 4 do not support Band 29 operations). The bottom and top frequency channels for Band 29 were enabled. The test includes channel bandwidth with the highest spectral density for both frequency bands. The carrier configurations for the radiated emission testing are provided below. Final maximized radiated emissions were measured in these modes.

Frequency Band	Antenna Port	RF Bandwidth	EARFCN	Transmit Frequency	Carrier & Port Power
Band 5	1	1.4 MHz	2407 (Bottom Channel)	869.7 MHz	40 Watts & 80 Watts
Band 5	2	1.4 MHz	2525 (Middle Channel)	881.5 MHz	40 Watts & 80 Watts
Band 5	3	1.4 MHz	2525 (Middle Channel)	881.5 MHz	40 Watts & 40 Watts
Band 5	4	1.4 MHz	2643 (Top Channel)	893.3 MHz	40 Watts & 40 Watts
Band 29	1	5 MHz	9685 (Bottom Channel)	719.5 MHz	40 Watts & 80 Watts
Band 29	2	5 MHz	9745 (Top Channel)	725.5 MHz	40 Watts & 80 Watts

Band 5 & Band 29 Carriers Enabled Simultaneously at Maximum Power

RE Data

A three-meter measurement distance was used for radiated emission measurements. The highest radiated emissions detected were more than 20dB below the three-meter limit of 82.2dB_{UV}/m (equivalent to -13dBm EIRP). Since all maximized measurements were more than 20dB below these levels, substitution measurements were not performed. TILE software was used for all preliminary scans and plots that are included on the following pages.
